

Technical Communication (8th Edition)

Technical Communication, 8/e (formerly Technical Writing) is a comprehensive, accessible introduction to technical and professional communication that deftly responds to the needs of the workplace today. Addressing a wide range of interests for classes in which students from a variety of majors are enrolled, Technical Communication, 8/e, combines practical applications with clear writing and examples. Rhetorical principles are explained, illustrated, and applied to an array of documents, from brief memos and summaries to formal reports and proposals. Coverage of such topics as document design, electronic communication, and oral presentations reflect the realm of technical communication today. Exercises, incorporated throughout the text, enable students to better understand the skills necessary both in college and in the workplace. While writing remains a central component of this text, the title has been changed to reflect the focus on the whole range of communication tasks in today's workplace—from managing collaborative groups to designing pages for the World Wide Web.
