

The Genesis Of Artistic Creativity: Aspergers Syndrome And The Arts

The nature of artistic creativity and its relationship with difference has intrigued people for centuries. The Genesis of Artistic Creativity is a revealing exploration of the lives of 21 famous writers, philosophers, musicians and painters including George Orwell, Wolfgang Amadeus Mozart, Andy Warhol and many others, in light of the recognized criteria for diagnosis of high-functioning autism and Aspergers Syndrome (AS). Having diagnosed hundreds of individuals with AS during his professional career, Professor Fitzgerald examines here the social behaviour, language, humour, and obsessive interests and routines that accompanied creative genius in the past four centuries. From Herman Melvilles eccentric breakfast habits and Simone Weils intense dislike of being touched by other people to Ludwig van Beethovens inappropriate marriage proposals and Vincent van Goghs inability to form satisfying relationships with others, the author offers compelling insights into the association between creativity and autism spectrum disorders. This celebration of artistic genius and AS will prove a fascinating read not only for professionals in the field of autism and AS, but for anyone interested in the sources of creativity and the arts.
